# KOMPAC®

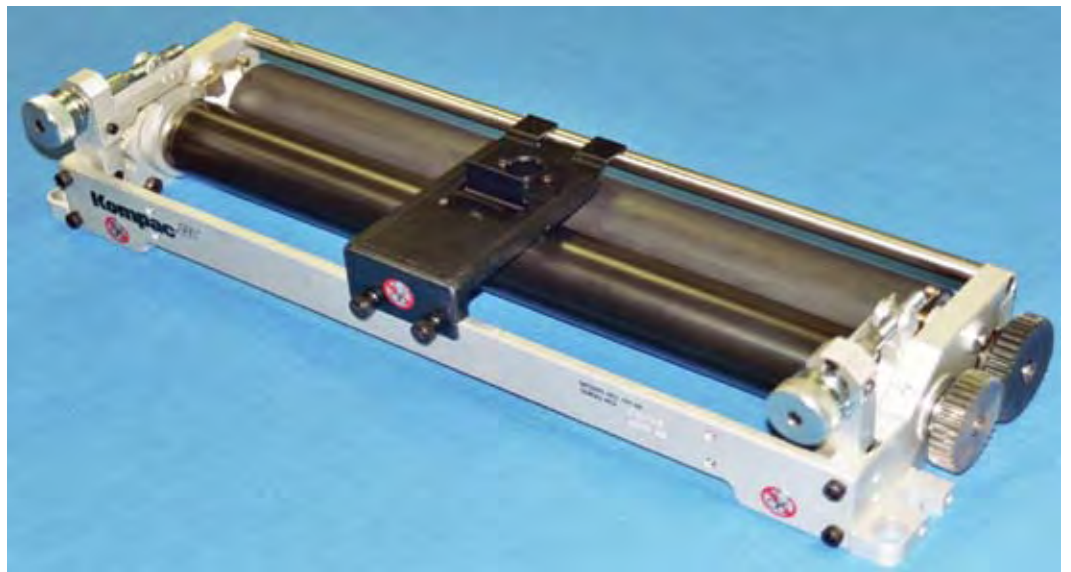

## Kompac Kwik Coat

The **Kompac Kwik Coat** is an easy and affordable way to offer customers added value and quality while increasing profit. Kompac's *Kwik Coat* offers a quick and versatile coating process from a patented proven system.

The patented Kompac Kwik Coat applies **aqueous** coating in an even and precise film without the use of the ink train. It provides a protective finish to any printed material.

Printed pieces will look glossier and more satiny than a standard press varnish. As an added benefit, aqueous coating "seals" the printed sheet, so that it is virtually dry when it comes off the press.

Installation of the Kompac Kwik Coat system is effortless and quick for Kompac Automatic Dampener users. The Kompac Kwik Coat system clean up is simple and easy with just plain water.

The Kompac Kwik Coat easily installs on the press in minutes for standard Kompac Dampening System users. Returning to standard printing is also a kwik and easy task. The Kompac Kwik Coat can also be retrofitted to conventional, DDS or Alcolor systems.

**Currently available for the  
Heidelberg GTO 46 & 52 and the Printmaster 52**

The Kompac Kwik Coat allows the printer to increase profits and provide extra value and higher quality to customers' printed materials with minimal start up costs. Kompac's Kwik Coat is the fastest and easiest way for a printer to provide additional competitive services for customers.

**Features, Advantages & Benefits:**

- Maximize your existing single color press for extra profit
- Gear driven rollers prevent slippage and guarantee a streak free smooth delivery of the coating to the printed piece
- Coating is supplied to the metering nip via a feed bottle
- Provide extra protection during mailing and shipping for digital output jobs
- Enhances special covers and brochures with a customized look and appearance
- Add a high quality look to print jobs for a very low start up investment
- Aqueous coating does not yellow with age
- No dryer is necessary
