

The EZ Koat Anilox System

Problematic coating is no longer a problem.

The Kompac EZ Koat series now offers a dual coating system: the standard system for conventional finishes like gloss and satin, and the new chambered anilox system for more difficult-to-run coatings like matte and soft touch. Changeover between systems takes minutes! The standard system operates with no coating recirculation and two-minute coating cleanup. To apply a more complex finish, simply engage the anilox system, where air tight liquid handling allows for the application of matte and soft touch coatings with ease. External coating feed and return lines circulate coating directly from the coating bucket, with no internal tanks or lines. Proprietary servo-driven technology delivers a quality finish, with the same compact footprint and low maintenance operation Kompac has always offered. System can be field installed to most existing EZ Koat models.

Upgrade your EZ Koat to Anilox for as low as **\$425/month!**

ABOUT THE EZ KOAT

The EZ Koat series is a cost-effective, small footprint, sheet-fed flood coating and priming system used to easily apply UV, aqueous, specialty coatings and primers. Operating at speeds up to 200 feet per minute, the EZ Koat provides coating control and speed adjustment on-the-fly with a new and improved operator interface. The unit uses a solid state digital UV lamp controller, which permits infinite curing and temperature control, translating to cost and power savings! The EZ Koat can be configured to run in-line or offline, sheet-fed or web-fed, with duplexing available. Other optional features include pallet and dolly-compatible high-pile feeding and stacking, IR drying, corona treating, anilox coating, and more!
