

Kompac

PHOENIX DUPLEX

NEXT GENERATION TWO-SIDED COATING/PRIMING

The **Phoenix Duplex** is Kompac's next generation coating and priming system, with sheet turning capability for two-sided applications. Configured inline or nearline, the system is designed as a coater, sheet turner, and a second coater, ideal for duplexing in a single pass. With flexibility in mind, the Phoenix Duplex is designed so that different finishes can be applied to each side. Further, multiple coating heads can be added to one or both coaters, in order to apply multiple primers/coatings per side in a single pass.

MAX SHEET: (30"X30"/76CMX76CM)
